

Dice -> Seed v1.10

One six-sided die. One HTML file. No network. Open it offline, roll, write the words by hand, wipe the tab, close the browser.

The page does not write localStorage or cookies. The browser can still keep RAM and session restore until you close the tab or shut Tails down.

Files

Basic stops at the words. No hex checker. **Full** can show three bc1 addresses, the account zpub, and a SeedQR.

Length	Transparent	Hardened (default)
12 words	53 rolls	64 rolls
24 words	105 rolls	128 rolls

Sixes stay sixes in the box. Paste a cleaned 0-5 line back in and each 0 becomes 6. Hardened hashes the cleaned zeros. Transparent is exact base-6 and may reject.

Ian Coleman

Auto-detect off. Type Dice [1-6]. Length 12 or 24, not Raw. Paste the 1-6 faces. Do not paste zeros into Dice [1-6]. The printf | sha256sum line uses zeros on purpose.

Bias strip and wipe

Amber or red under the tally is a warning. It does not block the phrase. Wipe this tab clears what the page can reach, then reloads. Close the tab. Tails: shut down. Tor Browser: JS must be on.

Write the words by hand. Never photograph, paste, or retype them on a connected device.

Package

File	Role
dice-to-seed_v1.10.html	Chooser
dice-to-seed_v1.10-basic.html	Ritual only
dice-to-seed_v1.10-full.html	Ritual + wallet
