

Pair index

1-based · same pairs, numbers raised by one

Use this file with SeedPhrasePoker v2.0.2. Printed numbers are 1–2048.

Blue 7♣ + orange 9♥ → look up that pair → write the word.

Do not mix the two booklets. Both lists contain the same 2048 pairs and the same BIP-39 words. Only the printed index differs. Pick one booklet and stay with it.

How a pair is built. Suit order ♥ ♦ ♣ ♠. Blue ranks A 2 3 4 5 6 7 8 (32 cards). Orange ranks A 2 3 4 5 6 7 8 9 10 J Q K JX QX KX (64 cards). Index = blue × 64 + orange, always 0–2047 on the page.

On the HTML page the marked orange faces JX QX KX sit on their own row so they are not missed.

The last physical pair is not copied as a word. The page keeps the missing entropy bits and fills the BIP-39 checksum from SHA-256.
